

## Installing Your Cinesamples Product - Hollywoodwinds

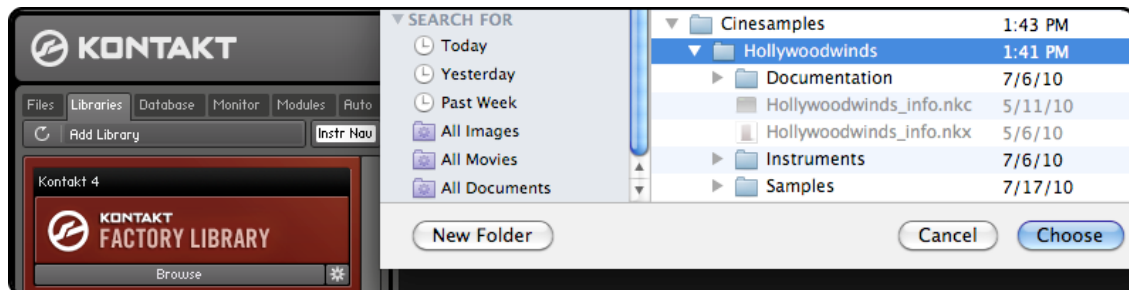

In your Downloads folder, or in the location you have told your browser to send your downloads, you will find the four .rar files shown to the left.\* You will need a utility that can extract these .rar files, like RarMachine or UnRarx for Mac, or WinRAR for Windows. No matter which you use, you will only need to select and unarchive the first file (part01). The utility will automatically create a Hollywoodwinds folder, and decompress all four .rar files into it.

This 3.96 GB folder contains your new sample library. You can now drag this folder to your sample hard drive. If this is your first Cinesamples product, you may want to create a Cinesamples folder beforehand.

Next, open Kontakt 4 or Kontakt 4 Player, navigate to the Libraries tab, and select Add Library. Select the Hollywoodwinds folder on your sample drive and click Choose. Your new library is now available in the Files and Libraries tabs, but before you can use it you will need to run Native Instruments Service Center and enter the license code that was emailed to you when you made your purchase. After your product is authorized, you are ready to go!

\*Note: Sometimes there can be errors in your .rar file download. Check to make sure that they are the proper sizes. Parts 1, 2, and 3 should be 1.05 GB, and Part 4 should be 592.3 MB

# CINESAMPLES FAQ

## TECHNICAL QUESTIONS:

*Can I add the library to the Kontakt library browser window?*

Only for Hollywoodwinds and VOXOS. Those are licensed for the free NI Kontakt Player. Just click the “add library” button and select the folder. All other libraries, you have to load manually via the “files” tab.

*I am having an error extracting the remaining parts of the RAR archives?*

Our libraries are often shipped in multiple bits called “RAR” files. This is to aid in the download process. Once the library is downloaded, you just extract “Part 1” and the remaining parts will be automatically extracted. **YOU DO NOT NEED TO EXTRACT THE REMAINING PARTS. THIS WILL CREATE DUPLICATE FOLDERS AND CAUSE CONFUSION.** The excellent Mac software we used to compress the archive is “RarMachine” (<http://www.candyware.net/RarMachine.html>) it is only \$8 and comes with a trial demo (enough to extract the library). A good alternative for PC users is WinZip. Often an error message presented by the native rar extractor will be solved by these two excellent softwares.

*Kontakt keeps asking me where to find the audio files, what do I do?*

Kontakt keeps track of the specific locations where your kontakt patches and linked audio files for these patches are located. If you move these files, say, while re-organizing your hard drive, Kontakt may present you an error message asking to “Please Locate the Audio Files”. You can manually browse for the files by folder and then save the patch, which will solve this issue. If you move the complete sample library folder, with internal hierarchy preserved, you will not receive this message (unless you have customized the patches). For any products with installers the location information will be entered into the patches at the time of installation (following a prompt from the installer application allowing you to customize the location).

*Are your libraries compatible with Kontakt 4?*

Yes, all of our libraries have been tested up to the latest version of Kontakt 4.

*What is your user agreement?*
